DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to subject matter including instrument for sensing and processing body sound in form of an electronic stethoscope, classified in class 381, subclass 67.
 - II. Claim 18, drawn to subject matter including ultrasonic measurement device, classified in class 600, subclass 437.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed in Group I does not require the particulars of the subcombination as claimed in Group II because the electronic stethoscope can use different sensor to measure body sounds (for example: audible transducer). The subcombination has separate utility such as the apparatus of ultrasonic measurement sensor can be used in system that is mounted on a large wheeled cart.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Group I further contains claims directed to the following patentably distinct species of the claimed invention:

Sub-group A, claims 1, 2-3, 6, 7 drawn to subject matter including instrument for selecting one of a multitude of languages to be used for generated speech output, classified in class 704, subclass 8.

Sub-group B, claims 1, 4-5 drawn to subject matter including physiological measurement means including species classified in class 600, subclass 301; electronic stethoscope classified in class 381, subclass 67; EKG measurement classified in class 600, subclass 428; ultrasonic measurement classified in class 600, subclass 601.

Sub-group C, claims 1, 8 drawn to subject matter including wireless pager, classified in class 340, subclass 7.2.

Sub-group D, claims 1, 9 drawn to subject matter including a microphone and speech recognition, classified in class 704, subclass 270.1.

Sub-group E, claims 1, 10 drawn to subject matter including radio frequency wireless digital communications, classified in class 455, subclass 41.2.

Sub-group F, claims 1, 11 drawn to subject matter including containing image sensor means, classified in class 348, subclass 222.1.

5. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims is allowable, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
